Small and medium businesses, large corporations, schools, nonprofits, and individuals alike jumped on the social media bandwagon. Although the concept is certainly simple enough, the broad-scale implementation has proven to be anything but that. Finding the right balance between corporate formality and personal engagement can be difficult. To help you break through the clutter and create a successful fan page or blog that you can be proud to share, we have put together a few tips on getting your platform to run at peak performance. 1. Develop a Strategy – If you don't have a clear vision of how you're going to use social media, you're allocating a lot of time, energy, and resources to something that's likely to be a waste of your time and money. Don't jump into the fray with whatever's free and convenient. Figure out what you want to do with social media and make sure you have a clear mission statement. Develop a strategy that accomplishes your business goals with the use of social media. Be sure to focus first on the basics: Research competitor's FB fan page Develop content (web pages and blog) that is consistent with the type of page you want to create Establish posting frequency Before setting out to develop a social media platform, it's important to assess your current digital presence. 2. Create a Facebook Business Page – If you need to reach out to your customers and prospects, it's not as hard as you think. What you do and say on Facebook can be accomplished easily. The good news is that most people you're trying to reach probably already have a Facebook account. You can easily request permission to post to their wall. So, this is a d41b202975
