Dark End is a hard roguelike RPG set in a grim world where the dark word has begun to take form. You will live and die many times as you battle the corruption in the world around you. Control a single character that can be instantly switched between multiple characters with your near constant companion Maestro. Conquer the dark side of the world by battling in randomly generated dungeons. But, beware! These dungeons are unpredictable with elements often changing even once you defeat a dungeon boss, leaving you to run a maze of biomes, combat, and demons. And, if all of this wasn't

bad enough, the Demon's will fight for a chance to consume the souls of the living. Dark End features a hard mode that will test your skills and wits, lots of unlockable features, and a well written and presented story. Key Game Features: Random Dungeon Gen Easy to pick up, but difficult to master Random Dungeon Geology Explore the varied biomes in a constantly changing dungeon Dungeon Bosses & A Game of Demons Death is part of the game, and death is permanent Lowest life gives higher chances of death A Game of Souls Your souls are your most precious possessions You must protect your souls from the Demon Dungeon Detours The dungeons contort and change as the game progresses, constantly presenting new challenges and new dungeons Time-traveling The timeline can be changed at any point No Level Cap Should you die, you will start in the same place as last time. The Struggle is real Solve puzzles to further your struggle against the Demon The Good Mastered the random dungeon generation Had my first run-in with the Demon's The Bad Some areas were tedious to traverse The story can be a bit dry The Verdict Overall between the various gameplay elements, the well told story, and sometimes quite awesome character dialog (love Griselda), DarkEnd is well worth the time for anyone who appreciates a harder RPG or even Roguelikes as they will feel at home. "I just went into the store to get some candy for my sister's birthday and all I could think about was when I could play it. Riptide GP: Renegade delivers a ton of solid game play while looking fantastic and keeping me hooked." 8.5/10 - @DDuckman5 the only feasible way to locate all subprime loans on a statewide basis. The nationwide searches by the bank and later by FSLIC and FDIC appear to have been undertaken with this in mind. All other methods such as data-base searches and reliance on third-party secondary dealers would be inadequate and impracticable. If this information was critical to a particular state, it should be maintained on a daily basis in that state by the appropriate supervisor of that state's agency. 33 Section 8(e)(2) of the FSLIC Act, 12 U.S.C. 1817(e)(2) requires the FSLIC to discharge all its duties in a manner consistent with "the highest standards of business and accounting practices." This language requires that the information gathered and kept in the FSLIC files be accurate, reliable and complete. The district court's conclusion that the Bank's method of locating subprime loans for each state was adequate is well-supported by the record, but this does not end the inquiry. 34 While this standard of business and accounting practices might be adequate for the banks, the SEC's evaluation of this method would be required to reflect the specific needs of the agency. If, as the SEC suggests, there are limitations as to the extent of searches necessary for compliance with section 8(e)(2), the limitations can only be determined after a review of the particular agency's activities and needs. We believe that the burden should be placed on the agency to prove that it has fully performed its duties within the section's mandate and not on the agency to show that it may not have performed its duties. 35 If the SEC, as an agency that operates with few funds, finds that its collection of information through its oversight of subprime lending in all 50 states is not adequate to assure the integrity and the usefulness of that information, it is the SEC's responsibility to find a better method, not the Bank's. The SEC has not persuaded this court that the Bank should be required to maintain a searchable computer file of subprime loans in each state and to maintain that searchable computer file continuously on a
