Layer Masks and the History Layer masks are incredibly useful, but you need to know when they work, or fail. When you paint with a layer mask, you're not editing the original image, but rather the layer mask. When a mask is on, the original is protected, but still visible. When you paint outside the mask area, it looks like you're erasing the original. But when you paint within the mask area, the original gets changed, too, and the eraser won't erase anything.

This guide will show you how to use Photoshop Elements to create the art and designs you desire. Photoshop Elements can be purchased in desktop, Mac or portable versions. For those of you who have never used Photoshop Elements before, this guide will cover all of the basic features that have been used to create my work. For those who do use Photoshop Elements daily, I will also focus on the Photoshop Elements shortcuts that I use most. Creating an image with Photoshop Elements The first image I will demonstrate how to create is an image of the Slack team logo with the color altered to orange. 1. Open Photoshop Elements and create a new document. Once opened, go to File>New to open the dialog box. This will be the first step of creating your new image. 2. Select the shape tool and drag out the shape tool, clicking to create a shape. The shape tool is next to the magnifying glass icon. 3. Click the shape tool again to create a line. 4. Hold down the Ctrl button, then click on the ellipse tool to draw out a circle. 5. Click the little down-pointing arrow next to the "Pencil" button, then select "Dashed" under the settings to draw a dashed line on the circle. 6. Click OK. Photoshop Elements will create a new layer for the circle. 7. Select both layers and click Ctrl + G to group them. 8. Now let's select the text tool. Click the text tool. 9. Type the letter "S" on the newly added layer. 10. Now select the shape tool again and select a circle. 11. Click the little down-pointing arrow next to the "Pencil" button, then select "Dashed" under the settings to draw a dashed line on the circle. 12. Click OK to create a new layer. 13. Type the letter "C" on the new layer. 14. Go to Edit>Groups>Merge to merge both the "S" circle and the "C" circle into one circle. 15. Create a new layer. 16. Type the letters "E", "D" and "G" on the new layer. 05a79cecff

Q: javascript create image tag I have a link that have path to image I need a script that will create a tag and put its link. So it will be like this: What is the best method for that? Possible without using jQuery. A: var img = document.createElement("img"); img.src = "../images/img.jpg"; document.getElementsByTagName("body")[0].appendChild(img); A: Try this $(document).ready(function(){ $('#menu a').each(function() { var $link = $(this); $('').appendTo('#menu'); }); }); A: var img = document.createElement('img'); img.src = '../images/img.jpg'; document.getElementsByTagName('body')[0].appendChild(img); Neuroanatomical organization of the nucleus accumbens in the house mouse: connections with prefrontal cortex. Although several lines of evidence suggest that the nucleus accumbens (Acb) is involved in the regulation of the functioning of the prefrontal cortex, the distribution of its connections with the prefrontal cortex has not been studied in detail. Therefore, we investigated the Acb-cortex connections in the mouse. A small deposit of anterograde and retrograde tracer at the ventral border of the Acb of the mouse induced neuronal labeling in all four divisions of the prefrontal cortex (dorsal, lateral, medial and ventral) in sections of the frontal brain. Indirect evidence for an extrageniculate origin of the inputs in the ventral division of the prefrontal cortex was found. The results indicate that the Acb possesses abundant connections with the prefrontal cortex. Q: why std::map::find() returns the key's address and not the key's value? I

Q: If we have the L^2 norm of a function, how can we estimate $\|u_p(y,z,t)\|_2$? Suppose we have a function $u(x,y,z,t)$ satisfies the following weak form: $$ \partial_t u + u\cdot \nabla u + \nabla p = 0,\ \ \mathrm{div}\ u = 0,\ (x,y,z) \in \Omega \times \mathbb{R}^2 \times \mathbb{R} $$ $$ u = 0 \ \ \mathrm{on}\ \partial \Omega \times \mathbb{R}^3 \times \mathbb{R} \\ u(x,y,z,0) = u_0(x,y,z) \ \ \mathrm{in}\ \Omega \times \mathbb{R}^3 \times \mathbb{R}. $$ And, suppose we have the L^2 norm $\|u_0\|_{L^2(\Omega \times \mathbb{R}^3)} = 1$, $$ L^2(\Omega \times \mathbb{R}^3) = \left\{u_0 \in L^2(\Omega \times \mathbb{R}^3)\ :\ \|u_0\|_{L^2(\Omega \times \mathbb{R}^3)} = 1\right\}, $$ $$ \langle u_0,u_0 \rangle_{L^2(\Omega \times \mathbb{R}^3)} = \|u_0\|_{L^2(\Omega \times \mathbb{R}^3)}. $$ How can I estimate the L^2 norm of the solution u? I want to apply the so-called Lions' Lemma to u. Thanks. A: Consider f defined on the $n+1$ variables $x \in \Omega$, $y \in \mathbb{R}^n$, $z \in \mathbb{R}$, and $t \in \mathbb{
