No other CAD application is as well-known or as popular as AutoCAD. It is the most widely-used application of its kind in the world. The first major releases of AutoCAD were for the Apple II, Apple IIgs, IBM PCs, and the DEC Rainbow Series of minicomputers. Subsequent releases targeted the Apple Macintosh and later Windows. Since 2001, AutoCAD has been released for the Mac OS X platform, as well as the Linux, UNIX,

and Windows platforms. In the 1990s, the acquisition and eventual merger of top-tier competitor companies led to the downfall of Autodesk and its eventual sale to the Japanese company, Softimage (now 3D Hubs). Autodesk retained the rights to sell Autocad and other software applications under the brand name AutoCAD. Over its 30-year history, AutoCAD has been used by millions of individual users as well as thousands of design organizations around the world.

AutoCAD history AutoCAD is a commercial computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a

desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. Prior to AutoCAD, many companies had their own CAD systems. Some CAD systems were developed using object-based graphical technologies, while others relied on punched card or dot-matrix print technology to generate 2D drawings. The first major releases of AutoCAD were for the Apple II, Apple IIgs, IBM PCs, and the DEC Rainbow Series of minicomputers. Subsequent releases targeted the Apple Macintosh and

later Windows. Since 2001, AutoCAD has been released for the Mac OS X platform, as well as the Linux, UNIX, and Windows platforms. History before AutoCAD In 1981, Autodesk released an inexpensive CAD program called AutoCAD 1, which was initially sold as a peripheral to the Aladdin VD-1 disk-based video display. However, as the price for the device, software, and display became a one-time cost to CAD users, it proved to be the main source of software for drafting and design. During the 1980

ABAQUS is used to model complex structures. The ABAQUS software is provided by the ABAQUS Development Company, AutoCAD Community Edition contains limited functionality for the direct manipulation of the drawing. Typical usages The following are some of the typical uses of AutoCAD: AutoCAD is used for modeling, computer-aided design (CAD), computer-aided engineering (CAE), 3D modeling, part or process modeling, plotting, rendering and output. Its most important features are 2D and 3D drawing capabilities, data exchange capabilities, animation and simulation capabilities, tools for data management, and built-in

engineering applications. AutoCAD is used in the manufacturing of automobiles, aircraft, refrigerators, buses, buildings, and other mechanical or electrical products. It is used for both the concept design and production phases of a product's life cycle. AutoCAD is used in the construction industry. It is used to create plans and specifications, facilitate data management, and for the manufacturing of architectural structures, architectural furnishings, land, and land management. AutoCAD is used in the construction of roads, bridges, and buildings for a variety of purposes, such as building plans and construction documentation. The AutoCAD-based ACIS Bridge Design program was

used as part of the third phase of the Interstate Highway System. It was a computer-based bridge design system that was used to design and draw conceptual, design, and construction documents for the United States' Interstate Highway System. AutoCAD is used by artists and visual effects artists for film, television, and video game production. Baldwin's Auto-Body ("Baldwins") appeal pro se the district court's summary judgment in favor of Chevy-Geo, Inc. ("Chevy-Geo") and Mark A. Baldwin ("Mark") in this diversity action arising from Chevy-Geo's termination of Baldwins' franchise. We have jurisdiction under 28 U.S.C. Sec. 1291 and we affirm. 3 Baldwins contend that summary judgment was improper because their state law claims for breach of contract, fraud, violation of California's Business and Professions Code Sec. 17200, and breach of good faith and fair dealing should have survived. This contention lacks merit. 4 "We review a grant of
